

PATCHLINK

ENTERPRISE REPORTING

ISSUES & ANSWERS:

- Measure and Ensure Network Security
- Demonstrate Compliance to Security Policies & Regulations
- Consolidate Security Data from Across the Enterprise
- Use or Customize Over A Dozen Sample Reports
- Easily Create Custom Reports
- Open Reporting Schema Works With Existing Reporting Tools

“Effective security management requires managers to understand the key performance indicators for their security processes and technical infrastructure. Not only do metrics provide visibility to management, but they can help demonstrate compliance with company policies and with regulations.”

Andrew Jaquith
Senior Analyst -
Yankee Group

Powerful Security Reporting Across Your Enterprise

PatchLink Enterprise Reporting™ provides powerful reporting that measures and demonstrates network security and compliance across the enterprise. As an extension of PatchLink Update™, Enterprise Reporting allows analysis and reporting on all aspects of the patch and vulnerability management process. With its Open Reporting Schema you can easily create and automate reports based on your unique security policies.

Measure and Manage Network Security

Ensuring compliance to network security policies and regulations is critical to an effective security strategy. Executives need accurate analysis and reporting to better understand their security posture and manage policies and regulations. With the Open Reporting Schema and advanced custom reporting capabilities, reporting goes beyond an administrative function and provides visibility for senior management to better measure and manage the patch and vulnerability process.

- Understand key performance indicators throughout the patch and vulnerability lifecycle
- Analyze trends and improvements to patch and vulnerability performance across your network
- Demonstrate and manage compliance to security policies and regulations over time
- Analyze global changes to hardware and software configurations overtime
- Monitor patch status levels across your enterprise

Vulnerability Name	Severity	Release Date	Release Size	Patched	Not Patched	Detecting
MS08-067: MSN 11 22 2008	Critical	11/22/08	128	102	26	0

Demonstrate and manage compliance to security policies and regulations.

Demonstrate and Improve Compliance to Security Policies and Regulations

Organizations are overwhelmed with data and need timely and accurate reporting to measure and demonstrate security and regulatory compliance. Based on unique security policies and key process indicators, PatchLink Enterprise Reporting gives you the ability to translate data through customized reports into actionable information for senior management.

Enterprise Reporting leverages existing mandatory baseline policies and inventory on PatchLink Update Servers. Through this you can create policy-based compliance reports to demonstrate Patch Compliance based on established policies and support Regulatory Compliance such as SARBOX, FISMA, HIPAA and more. If end-points are not compliant, use PatchLink Update to immediately remediate.

- Customize policy-based compliance reports to demonstrate compliance to required patch-levels
- Support regulatory compliance reporting related to patch and vulnerabilities
- Remediate non-compliant end-points with PatchLink Update

Use key process indicators and mandatory baseline policies to develop custom compliance and security trending reports.
