

AppScan® Enterprise OnDemand

Today, many organizations utilize manual testing or tactical, desktop tools to manage web application security, but too often these approaches overburden security resources and become organizational bottlenecks.

Forward-thinking organizations are quickly adopting the strategic, enterprise approach of Watchfire's AppScan® Enterprise.

Built upon the market-leading AppScan technology, AppScan Enterprise is the industry's first scalable, web-based, multi-user system to manage web application security. AppScan Enterprise provides customers with:

- Complete Application Coverage: the processing power of the server-based scanning engine allows you to test websites with thousands of applications, analyzing multiple applications simultaneously.
- Comprehensive Reporting & Issue Management: the robust, database-driven reporting engine automatically aggregates scan results, creating a central repository of data that accommodates multiple views and ongoing analysis.
- Visibility & Control: the enterprise-wide consolidation of data allows executives to see the security status of all applications and make more informed decisions about resource allocation, fix prioritizations, and employee training needs.
- Better Asset Protection: the more comprehensive approach to web application security affords greater insurance that vulnerabilities will be found and fixed before going public.

AppScan Enterprise OnDemand

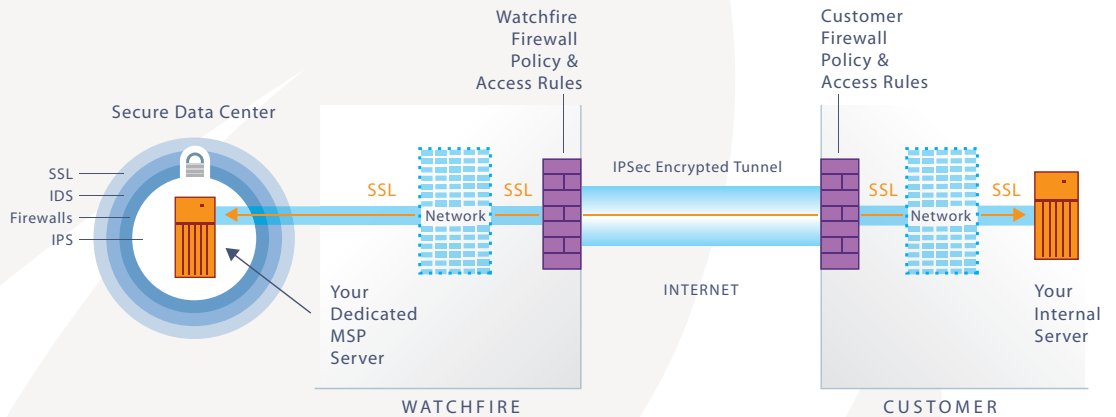

Deploying AppScan Enterprise as a managed service makes sense, particularly for those companies that need to scale their internal security teams. With nothing to install, no hardware to buy and no upgrade costs to worry about, you can maximize your return of AppScan Enterprise, while avoiding the hidden costs of packaged software.

Besides the typical services one expects from a managed service, Watchfire's AppScan Enterprise OnDemand goes one step further. AppScan Enterprise OnDemand customers also have ongoing access to a Watchfire security analyst. Your Watchfire security analyst will be your outsourced web application security administrator, as well as a trusted consultant and partner for your organization.

Watchfire believes one of the key value propositions of outsourcing is the knowledge transfer that occurs when consultants work closely with clients. Unlike other web application security consultants, who tend to disappear for a few days and then reappear with a report, Watchfire's security experts make it a point to work shoulder-to-shoulder with your security audit teams and developers — sharing best practices and the latest secure coding principles.

INSTEAD OF FOCUSING ON THE TECHNOLOGY, OR TRYING TO INTERPRET RESULTS, APPSCAN ENTERPRISE ONDEMAND ALLOWS YOU TO STAY FOCUSED ON WHAT'S MOST IMPORTANT — IMPROVING THE SECURITY OF YOUR WEB APPLICATIONS.

AN ENTERPRISE PLATFORM
 THAT MANAGES ALL ASPECTS OF
 THE ONLINE BUSINESS, INCLUDING
 WEB APPLICATION SECURITY,
 PROVIDES ORGANIZATIONS WITH
 THE INFORMATION NECESSARY
 TO MAKE INFORMED, INTELLIGENT
 BUSINESS DECISIONS ON
 SECURITY, PRIVACY, AND OTHER
 EXTERNAL THREATS.

Watchfire security analysts are recognized experts in the web application security space and have performed thousands of web application security assessments for our customers. Your Watchfire security analyst will:

- Configure and tune the scans to ensure complete coverage of each application
- Review and analyze the results to:
 - Eliminate false positives
 - Identify patterns and prioritize key issues
 - Highlight key remediation tasks
- Track remediation progress by:
 - Maintaining trend data
 - Individually tracking the resolution of key issues from scan to scan
 - Reporting on remediation effectiveness
- Train AppScan OnDemand report consumers

AppScan Enterprise OnDemand's Own Security Protocol

The AppScan Enterprise OnDemand environment has been built with security in mind and utilizes the industry's most potent security tools and techniques for enterprise-class web operations.

Watchfire: Security Market Leaders

- Gartner and IDC agree — Watchfire is the worldwide market share leader for application security, with more than twice the market share of the nearest competitor.
- Watchfire is an innovator in the security market — we introduced the first web application security testing tool (AppScan) and our dedicated research team discovered application vulnerabilities such as HTTP response splitting, request smuggling and XPath injection.
- Even other security companies recognize our leadership. AppScan customers include Symantec, VeriSign, and Cybertrust.

About Watchfire

Watchfire provides Online Risk Management software and services to help ensure the security and compliance of websites. More than 500 enterprises and government agencies, including AXA Financial, SunTrust, HSBC, Vodafone, Veterans Affairs and Dell rely on Watchfire to audit and report on issues impacting their online business. Watchfire has been the recipient of several industry honors including the HP/IAPP Privacy Innovation Award, InfoSecurity Product Guide's Hot Security Company 2006, Computerworld's Innovative Technology Award, and "Recommended" rating by Computer Reseller News. Watchfire was named by Gartner and IDC as the worldwide market-share leader in web application vulnerability assessment software. Watchfire's partners include IBM Global Services, PricewaterhouseCoopers, Sapient, Fortify, Microsoft, Interwoven, WebTrends, EMC Documentum and Mercury. Watchfire is headquartered in Waltham, MA.
